Diversified Lane pond repair project to begin

ELLICOTT CITY, MD – A Howard County construction project to repair a storm water management pond in the vicinity of 9780 and 9792 Diversified Lane in Ellicott City is expected to begin on or about Monday, September 24. A new concrete riser and 24-inch concrete principal spillway pipe will replace the existing metal riser and principal spillway. In addition, the pond will be regraded to provide more storage during rain events, the embankment will be raised and a forebay will be added. A storm drain will also be added to collect runoff and direct flow to the pond. The outfall of the pond will be stabilized using a series of rock grade control structures. Weather permitting, the project is expected to be completed by late January 2019.

The project is not expected to impact the flow of traffic; however, the sidewalk adjacent to the construction entrance on Diversified Lane will be closed during construction. Signs will be posted at the project site to advise motorists and pedestrians of the construction and sidewalk closure.

A portion of this project is funded through the Watershed Protection and Restoration Fund.
